

### **Abstract of the Invention**

5       --A server on a data network including software for providing a bill  
payment service for a user comprising a bill-payment module for navigating  
to the user's multiple data sources on the data network collecting and  
aggregating data on behalf of the user comprising, a main interface for listing  
the bills due and payment accounts of the user, a plurality of links enabling  
viewing and manipulation of bill history, recurring payments, and automated  
10   transfer of funds between registered accounts and a link for viewing calendar  
data. The system further provides a plurality of drop-down menus wherein  
each menu is associated with a listed bill, the menus providing a plurality of  
selectable, interactive options for viewing, managing and paying a bill and a  
link embedded in the main interface for enabling selective or complete data  
15   refreshing of data displayed in the interface.--
